### WHAT IS ALKALINE WATER?

To be considered alkaline water, the water must have a pH higher than 7.0. The pH scale ranges from 0 to 14, with 7 being neutral. A pH of less than 7 is acidic while a pH greater than 7 is alkaline (basic).

### WHAT ARE THE BENEFITS OF ALKALINE WATER?

Is alkaline water good for you? Essentia's ionized alkaline water has a pH of 9.5 or higher and a clean, smooth taste which provides the body with necessary hydration. Alkaline water benefits or results are individual to each person. Some of our customers report immediate, positive results, while others more gradual.

### WHAT DOES SUPERCHARGED MEAN?

Our proprietary ionization process gives our water a pH of 9.5 or higher by removing bitter-tasting acidic ions. The end result is a 99.9% pure premium water with a balance of electrolytes and minerals that complement body's mix – all with a clean, smooth taste.

For more information about how to get  
ESSENTIA WATER, contact your **Southern  
Beverage** representative.
