

# ABOUT NESTLE PURE LIFE

# PURE LIFE®

## WHAT IS PURIFIED WATER?

We source our water from wells or municipal supplies, then put it through our 12-step quality process. This means that it meets strict standards for bottled water. And you can be sure to enjoy the same crisp, clean taste wherever you pick up a bottle.

- Every drop in every bottle of our purified water goes through a rigorous quality process. That's how we can make sure it meets our high safety standards, and tastes great too.
- Added minerals for taste The mineral content of any drinking water is measured scientifically to check which are present. We add a light blend of minerals to our water, to give **Nestlé® Pure Life®** Purified Water its distinctive, refreshing taste.

## RECYCLING OUR BOTTLES

All of our PET bottles are recyclable. Once recycled, they'll be cleaned, dried and melted to form pellets, called nurdles, that can be recycled back into the bottle or used to make other useful products. What happens when you recycle our bottles?

- 1. COLLECTING** Your bottle is picked up and taken to the recycling center.
- 2. SORTING** Items are separated according to the resin they're made from.
- 3. SHREDDING** A machine cuts your bottle into tiny bits and pieces.
- 4. CLEANING** These pieces are washed to get rid of anything that was inside the bottle.
- 5. MELTING** The pieces are heated up and turned into tiny pellets, called nurdles.

## VARIETIES

- NESTLE PURE LIFE 24/700ML BTL 
- NESTLE PURE LIFE 28/.5LT BTL 
- NESTLE PURE LIFE 24/200Z BTL 
- NESTLE PURE LIFE 24/80Z BTL
